## WAYNE COOPER FLEXIBLE FISH EYES

MATT THOMPSON  
EYE SOCKETS

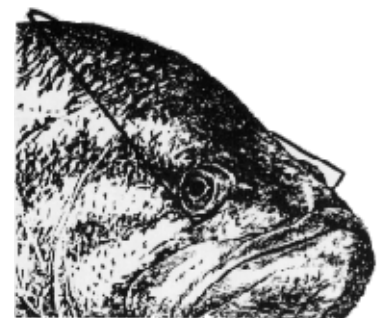

A TOTALLY NEW INVENTION CONSISTING OF A FLEXIBLE FISH EYE AND RADICAL SETTING SYSTEM

### SETTING FLEX EYES

Flatten cheeks after they have been filled with mache. Scoop excess filler from eye socket. Place a small piece of foam rubber in each socket. This will hold the Flex Eye firm in the socket acting as a spring pushing the eye outward against the eye orbit bone. When inserting Flex Eye align pupil, place bottom of eye in socket first then push top, down and in place. A tension wire can be placed on the lower part of the socket to keep the socket in contact with the Flex Eye.
